Overview:

The customer is the U.S. subsidiary of a global defence, security and aerospace company which delivers a full range of products and services for air, land and naval forces, as well as advanced electronics, security, information technology solutions and customer support services. The prestigious client as mentioned is a leading provider of defence related equipment with world-wide presence. It consists of different divisions for army, navy, air force etc. based on its clients.

Challenge:

To provide the client with a capable requisition and supply management system. The client wants such a functionality by which they can process the quotation, orders, delivery details and also in-voice. Each of these steps follows a different flow. Users can access the status of each order whenever required. The solution should be able to generate reports based on the requirement.

Methodology & Approach:

AL TOMOUH has provided the client with the custom developed, web based Requisition & Supply Management System. The solution is web based and has user profiles administered by the company. The solution features different process flow for different divisions based on the requirement. The solution also features easy and automated management of order processing according to the typical requirements of the defence sector client. At any stage, he user can check the progress of the requisition and supply order. Different processes for each division are based on the requirement. Our system provides the client, functionality to add Master value in database from Screen, Master Values Includes Items, Supplier, Division, User, Obsolete Items etc.

Outcomes & Conclusion:

The process is simple and easily differentiated from other steps.

The client can easily get the Status of Order. On the basis of delivery, they can generate all the invoices.
The system provides reports for each and every screen use.

Our system provides the client, functionality to add Master value in database from Screen, Master Values Includes Items, Supplier, Division, User, Obsolete Items.
F
or Local Suppliers, it will be based on Item Supplier Mapping. Different processes for each division are based on the requirements
